PROFESSIONAL SUMMARY

AI Engineer and MSc Data Science student with hands-on experience shipping end-to-end Machine Learning and Generative AI systems, from data pipeline to cloud deployment. Proficient in Python, Flask, React, and Google Cloud Run, with applied experience in model training, explainability (SHAP), Retrieval-Augmented Generation (RAG), and multi-agent AI systems. Independently identified and resolved real production issues, including data leakage, exposed credentials, and misconfigured deployments, across 4 deployed AI products.

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript

Machine Learning: Scikit-learn, XGBoost, Random Forest, TensorFlow, Deep Learning, LSTM, ARIMA, Time Series Forecasting

Generative AI: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Agents, Natural Language Processing (NLP), Gemini API, Groq API

Data Science: Pandas, NumPy, Matplotlib, SHAP, Data Visualization

Web Development: Flask, React, HTML, CSS, Tailwind CSS, REST APIs

Cloud & Tools: Git, GitHub, Google Cloud Run, Docker, Model Deployment, CI Testing, VS Code

ACADEMIC & INDEPENDENT PROJECTS

DataMind AI — Autonomous Multi-Agent Analytics Platform

Python, Flask, Groq LLaMA 3.3 70B, Scikit-learn, SHAP, React | [GitHub](#) | [Live Demo](#)

- Architected a 5-stage autonomous multi-agent pipeline (Detective, Analyst, ML Engineer, Guardrails, Reporter) that ingests raw data and produces a full ML analysis and report with no manual intervention.
- Benchmarked the system against a 6-category agentic AI framework (RAG, Multi-Agent, Guardrails/Eval, LLMOps, Human-in-the-Loop, MCP/A2A) and closed all identified gaps end-to-end.
- Engineered a Guardrails/Eval agent that cross-checks the LLM's confidence and risk claims against real quality metrics, backed by a human-in-the-loop review gate and lightweight RAG retrieval.

FinSight AI — AI-Powered Stock Forecasting & Financial Intelligence Platform

Flask, LSTM, ARIMA, VADER Sentiment Analysis, RAG | [GitHub](#) | [Live Demo](#)

- Built a full-stack forecasting platform combining Linear Regression, ARIMA, LSTM, and VADER sentiment analysis, with a risk analyzer and prediction-confidence meter.
- Conducted a senior-level security audit that uncovered a publicly exposed production database and hardcoded debug mode; resolved both and corrected documentation before redeployment.
- Shipped a v3 rebuild integrating a RAG-powered financial assistant and a redesigned frontend; deployed live on Google Cloud Run (asia-south1).

CustomerIQ — Customer Segmentation, Churn Prediction & Revenue Intelligence

Python, Random Forest, XGBoost, Flask, Chart.js | [GitHub](#) | [Live Demo](#)

- Diagnosed a data leakage issue behind an implausible 100% accuracy result; rebuilt the pipeline with proper train/test splitting and cross-validation.
- Benchmarked 6 ML models (Random Forest, XGBoost, Logistic Regression, Gradient Boosting, Decision Tree, KNN); finalized Random Forest at 82.26% verified test accuracy.
- Delivered RFM-based customer segmentation and Customer Lifetime Value (CLV) estimation through an interactive Flask + Chart.js dashboard.

Intelligent Credit Risk & Loan Pre-Eligibility System

Python, XGBoost, Scikit-learn, Streamlit, Gemini API | [Live Demo](#) | [GitHub](#)

- Trained and benchmarked 3 ML models on 265,000+ Lending Club loan records (2007-2018); best model (XGBoost) achieved 0.743 ROC-AUC and 81.2% test accuracy.
- Engineered a full decision pipeline (eligibility rules → ML risk scoring → risk banding → plain-English explanation) with an analytics dashboard covering default rate by grade, purpose, and risk band.
- Integrated a Gemini-powered conversational assistant enabling rejected applicants to query, in natural language, the reasoning behind their decision.

EDUCATION

MSc Data Science — Dayananda Sagar University, Bengaluru (2025 – 2027)

BSc Data Science — Presidency University (2021 – 2024)

ACHIEVEMENTS

- Shipped and deployed 4 production-ready AI/ML applications live on the public internet (Google Cloud Run, Render).
- Owned each project end-to-end: data pipeline, model training, explainability, deployment, and post-deployment security auditing.
