PROFESSIONAL SUMMARY

MSc Data Science student and AI Engineer with hands-on experience building and deploying end-to-end Machine Learning and Generative AI products. Skilled in Python, Flask, React, and cloud deployment (Google Cloud Run), with practical experience across the full ML lifecycle: data pipelines, model training, explainability (SHAP), Retrieval-Augmented Generation (RAG), and AI agent systems. Track record of shipping multiple production-ready applications, identifying and fixing real model and security issues (data leakage, exposed credentials), and translating ambiguous problems into working, deployed AI products.

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript

Machine Learning: Scikit-learn, XGBoost, Random Forest, TensorFlow, LSTM, ARIMA, Time Series Forecasting

Generative AI: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Agents, Gemini API, Groq API

Data Science: Pandas, NumPy, Matplotlib, SHAP, Data Visualization

Web Development: Flask, React, HTML, CSS, Tailwind CSS, REST APIs

Cloud & Tools: Git, GitHub, Google Cloud Run, Docker, VS Code

ACADEMIC & INDEPENDENT PROJECTS

DataMind AI — Autonomous Multi-Agent Analytics Platform

Python, Flask, Groq LLaMA 3.3 70B, Scikit-learn, SHAP, React | GitHub | Live Demo

- Designed and built a 5-stage autonomous multi-agent pipeline (Detective, Analyst, ML Engineer, Guardrails, Reporter) that ingests raw data and produces a full ML analysis and report with no manual intervention.
- Audited the system against a 6-category agentic AI framework (RAG, Multi-Agent, Guardrails/Eval, LLMOps, Human-in-the-Loop, MCP/A2A), identified gaps, and implemented all 6 categories end-to-end.
- Built a Guardrails/Eval agent that cross-checks the LLM's own confidence and risk claims against real quality metrics, plus a human-in-the-loop review gate and a lightweight RAG chat layer.

FinSight AI — AI-Powered Stock Forecasting & Financial Intelligence Platform

Flask, LSTM, ARIMA, VADER Sentiment Analysis, RAG | GitHub | Live Demo

- Built a full-stack forecasting platform combining Linear Regression, ARIMA, LSTM, and VADER sentiment analysis, with a risk analyzer and prediction-confidence meter.
- Conducted a senior-level security and code audit that surfaced a publicly committed production database and debug mode left on; resolved both and corrected the documentation before redeploying.
- Shipped a v3 rebuild adding a Retrieval-Augmented Generation (RAG) financial assistant and a redesigned frontend; deployed live on Google Cloud Run (asia-south1).

CustomerIQ — Customer Segmentation, Churn Prediction & Revenue Intelligence

Python, Random Forest, XGBoost, Flask, Chart.js | GitHub | Live Demo

- Identified and corrected a data leakage issue after an initial model returned an implausible 100% accuracy; rebuilt the pipeline with proper train/test splits and cross-validation.
- Benchmarked 6 ML models (Random Forest, XGBoost, Logistic Regression, Gradient Boosting, Decision Tree, KNN); final Random Forest model achieved 82.26% verified test accuracy.
- Built RFM-based customer segmentation and Customer Lifetime Value (CLV) estimation, delivered through an interactive Flask + Chart.js dashboard.

Intelligent Credit Risk & Loan Pre-Eligibility System

Python, XGBoost, Scikit-learn, Streamlit, Gemini API | Live Demo | GitHub

- Trained and compared 3 ML models on 265,000+ Lending Club loan records (2007-2018); best model (XGBoost) achieved 0.743 ROC-AUC and 81.2% test accuracy.
- Built a full decision pipeline (eligibility rules → ML risk scoring → risk banding → plain-English explanation) and an analytics dashboard covering default rate by grade, purpose, and risk band.
- Integrated a Gemini-powered AI assistant so rejected applicants can ask, in natural language, why their application was declined.

EDUCATION

MSc Data Science — Dayananda Sagar University, Bengaluru (2025 – 2027)

BSc Data Science — Presidency University (2021 – 2024)

ACHIEVEMENTS

- Shipped and deployed 4 production-ready AI/ML applications live on the public internet (Google Cloud Run, Render).
- Owned each project end-to-end: data pipeline, model training, explainability, deployment, and post-deployment security auditing.
